Grade 2 ELA Question Bank

Topic 3: Informational Text and Research Skills

Common Core alignment: RI.2.1–RI.2.10

Instructions: Read each nonfiction passage carefully, then choose the best answer. This bank contains 150 multiple-choice questions: 50 Easy, 50 Medium, and 50 Hard. An answer key is included.

Skills covered: main topic and key details, text features, vocabulary in context, connections and sequence, explanations, and identifying how information is organized.

Easy Questions

Passage 1: Busy Bees

Bees are insects that visit flowers. Pollen can stick to a bee's body as it moves from flower to flower. Bees may carry pollen to other flowers, helping plants make seeds. Bees also collect nectar, which they use to make honey.

1. What kind of animal is a bee?

A. A bird
B. A reptile
C. An insect
D. A fish

2. Where do bees often visit?

A. Caves
B. Classrooms
C. Flowers
D. Deserts only

3. What can stick to a bee's body?

A. Snow
B. Paper
C. Sandwiches
D. Pollen

4. What may a bee carry to another flower?

A. Pollen
B. A stone
C. A nest
D. A leaf bag

5. How do bees help many plants?

A. They stop flowers growing
B. They help plants make seeds
C. They turn flowers into rocks
D. They pull up plants

6. What do bees collect from flowers?

A. Bark
B. Nectar
C. Paper
D. Pebbles

7. What do bees use nectar to make?

A. Juice
B. Bread
C. Milk
D. Honey

8. Which detail explains how bees help plants?

A. They sleep in books
B. They eat tree bark
C. They build roads
D. They carry pollen between flowers

9. What is the passage mostly about?

A. How bees help flowers and make honey
B. How to build a birdhouse
C. How to plant a forest
D. Why fish live in water

10. Which kind of text is this?

A. A personal letter
B. A play
C. An informational passage
D. A fairy tale

Passage 2: A School Garden

A school garden helps students learn about plants. Students plant seeds, water the soil, and watch for new leaves. Some classes measure plants each week and record their findings in a chart. Gardens may attract butterflies and other insects. Caring for a garden teaches students to look after living things.

1. What can a school garden help students learn about?

A. Computers only
B. Cars
C. Musical instruments
D. Plants

2. What might students plant?

A. Shoes
B. Books
C. Seeds
D. Coins

3. What do students water?

A. Their notebooks
B. The soil
C. The ceiling
D. The sidewalk

4. What may students watch for?

A. New roads
B. New televisions
C. New pencils
D. New leaves

5. How often might students measure plants?

A. Never
B. Each week
C. Every hour
D. Every ten years

6. Where might students record findings?

A. On a shoe
B. In a chart
C. In a lunchbox
D. On a cloud

7. What might a garden attract?

A. Boats
B. Trains
C. Butterflies
D. Cars

8. What does gardening teach students to care for?

A. Living things
B. Computer screens
C. Plastic toys only
D. Empty boxes

9. What is the main topic?

A. How to bake a cake

B. How a school garden helps students learn
C. How to play a trumpet
D. How to drive a car

10. Which feature best shows plant heights over time?

A. A comic strip
B. A recipe
C. A chart
D. A greeting card

Passage 3: A Turtle's Shell

A turtle has a hard shell that protects its body. Some turtles live on land, while others spend much of their time in water. Turtles breathe air with lungs. Many turtles lay eggs in nests they dig in sand or soil. A turtle's shell is part of its body, so it cannot simply leave it behind.

1. What protects a turtle's body?

A. Its fur
B. Its feathers
C. A paper covering
D. Its shell

2. Where do some turtles live?

A. On the Sun
B. In clouds
C. On land
D. Inside books

3. Where do other turtles spend much time?

A. In classrooms
B. In water
C. In fire
D. In trees only

4. What do turtles use to breathe?

A. Wings
B. Feathers
C. Lungs
D. Fins

5. What do many turtles lay?

A. Apples
B. Books
C. Eggs
D. Stones

6. Where might a turtle nest be?

A. In sand or soil
B. In a freezer
C. In a shoe
D. On a roof only

7. Can a turtle leave its shell behind?

A. Only in winter
B. No, it is part of its body
C. Yes, every morning
D. Only when it swims

8. Which detail tells how turtles breathe?

A. They live on land
B. They use lungs

C. They have shells
D. They dig nests

9. What is the passage mainly about?

A. How to build a pond
B. Basic facts about turtles
C. Why birds migrate
D. How to bake bread

10. Which statement is a fact from the passage?

A. Turtles breathe through feathers
B. A turtle has a hard shell
C. All turtles live only on land
D. Turtles leave their shells behind

Passage 4: Keeping Teeth Healthy

Teeth help us bite and chew food. Brushing twice a day helps remove food and plaque. Flossing cleans between teeth where a toothbrush may not reach. Drinking water and eating a range of healthy foods can support strong teeth. Regular dental visits help a dentist check for problems.

1. What do teeth help us do?

A. Smell flowers
B. See colors
C. Bite and chew food
D. Hear music

2. How often does the passage say to brush?

A. Only on weekends
B. Twice a day
C. Once a month
D. Every hour

3. What can brushing remove?

A. Shoes and socks
B. Hair and dust
C. Water and air
D. Food and plaque

4. What can clean between teeth?

A. A spoon
B. A glove
C. A pencil
D. Floss

5. Why is floss useful?

A. A toothbrush may not reach between teeth
B. It colors teeth
C. It makes teeth disappear
D. It replaces all brushing

6. Which drink can support healthy teeth?

A. Paint
B. Ink
C. Cooking oil
D. Water

7. Who checks teeth at a dental visit?

A. A pilot
B. A dentist
C. A musician

D. A farmer

8. What do regular dental visits help with?

A. Checking for problems
B. Teaching swimming
C. Planting seeds
D. Repairing roads

9. What is the passage mainly about?

A. Ways to keep teeth healthy
B. How ears work
C. How to build a house
D. Why clouds move

10. Which action supports healthy teeth?

A. Never drinking water
B. Eating only candy
C. Brushing and flossing
D. Avoiding dental visits

Passage 5: Weather Tools

Weather tools help people observe conditions outside. A thermometer measures temperature. A rain gauge collects and measures rainfall. A wind vane shows the direction the wind is blowing. Meteorologists use these tools and other information to describe and predict the weather.

1. What do weather tools help people observe?

A. Conditions outside
B. The sound of books
C. The taste of food
D. The age of trees only

2. What does a thermometer measure?

A. Distance
B. Temperature
C. Wind direction
D. Rainfall

3. What does a rain gauge measure?

A. Cloud color
B. Time
C. Rainfall
D. Temperature

4. What does a wind vane show?

A. Tree age
B. Rain weight
C. Wind direction
D. Room sunlight

5. Who uses tools to help predict weather?

A. Actors
B. Meteorologists
C. Bakers
D. Dentists

6. Which tool measures how much rain fell?

A. A rain gauge
B. A flashlight
C. A wind vane
D. A thermometer

7. Which tool tells whether air is warm or cold?

A. A ruler
B. A thermometer
C. A rain gauge
D. A wind vane

8. What does a wind vane identify?

A. How much rain fell
B. A tree's height
C. The number of days in a month
D. The direction the wind blows

9. What is the main topic?

A. Tools used to observe weather
B. How birds build nests
C. Parts of a bicycle
D. Ways to cook dinner

10. Which statement is supported?

A. A thermometer shows wind direction
B. A rain gauge measures temperature
C. Meteorologists use tools and information to predict weather
D. A wind vane measures rainfall

Medium Questions

Passage 1: From Seed to Plant

A seed contains a young plant and stored food. With enough water, air, and suitable warmth, it may germinate. First, a root grows down into the soil. Then a shoot grows upward toward light. Leaves develop and help the plant make food. Some seeds do not grow because conditions may be unsuitable or the seeds may be damaged.

1. What does a seed contain?

A. Only soil
B. A fully grown tree
C. A young plant and stored food
D. A flower pot

2. What helps a seed germinate?

A. Ice and no air
B. Loud sounds
C. Water, air, and suitable warmth
D. Paint and paper

3. What usually grows first?

A. A flower
B. An apple branch
C. A fruit
D. A root

4. In which direction does the root grow?

A. Across the sky
B. Up toward clouds
C. Down into the soil
D. Out of the pot

5. Which part grows upward toward light?

A. The seed coat only
B. The shoot
C. The soil
D. The root

6. How do leaves help a plant?

A. They pull out roots
B. They remove soil
C. They help it make food
D. They stop growth

7. Why might a seed fail to grow?

A. It always becomes a fish
B. It has too many leaves
C. It is watered once
D. It may lack suitable conditions

8. What does germinate mean here?

A. Begin to grow
B. Stop growing forever
C. Disappear
D. Turn into soil

9. Which sequence is correct?

A. Shoot grows down and root grows up
B. Fruit grows, seed vanishes
C. Root grows, shoot grows, leaves develop
D. Leaves develop, seed is planted, root disappears

10. What is the main idea?

A. Roots grow toward the sky
B. Seeds need suitable conditions and grow in stages
C. All seeds grow in one day
D. Plants do not need light

Passage 2: Recycling at School

At Greenway School, blue bins were for clean paper, yellow bins for plastic bottles, and a gray bin for rubbish not accepted in the school's recycling program. At first, some students put food scraps in the paper bin. The eco-club added picture labels and gave a short talk. Sorting mistakes then became less common. Each month, the school weighed the collected materials to measure how much it recycled.

1. What went into blue bins?

A. Food scraps
B. Plastic bottles
C. All rubbish
D. Clean paper

2. What went into yellow bins?

A. Books only
B. Food scraps
C. Plastic bottles
D. Clean paper

3. What was the gray bin for?

A. Only clean paper
B. Flowers
C. Plastic bottles
D. Rubbish not recycled in the program

4. What mistake happened at first?

A. Bottles went in the yellow bin
B. Food scraps went in the paper bin
C. Paper went in the blue bin
D. Bins were weighed

5. How did the eco-club help?

A. It stopped lunch
B. It painted every item blue
C. It removed every bin
D. It added picture labels and gave a talk

6. What happened after the labels and talk?

A. The school stopped recycling
B. Sorting mistakes became less common
C. All items became rubbish
D. The bins disappeared

7. Why did the school weigh materials each month?

A. To count chairs
B. To measure students' heights
C. To measure how much it recycled
D. To measure rainfall

8. What is the main idea?

A. All rubbish belongs in one bin
B. The eco-club closed the cafeteria
C. Clear instructions helped students sort waste better
D. Recycling is impossible

9. Which text feature best shows amounts recycled each month?

A. A recipe
B. A bar graph
C. A greeting card
D. A fictional dialogue

10. What can be inferred about the picture labels?

A. They helped students identify the right bins
B. They were used to weigh rubbish
C. They made sorting harder
D. They replaced all bins

Passage 3: Why Leaves Change Color

Many leaves look green during the growing season because they contain chlorophyll, which helps plants use sunlight to make food. In autumn, days become shorter and temperatures often cool. Some trees make less chlorophyll, allowing yellow and orange colors already in the leaves to show. Other substances can create red or purple shades. Colors and timing vary by tree type and weather.

1. What makes many leaves look green?

A. Tree bark
B. Sand
C. Chlorophyll
D. Rain alone

2. What does chlorophyll help plants do?

A. Use sunlight to make food
B. Drink only through leaves
C. Make rocks
D. Grow without roots

3. When do many leaves change color?

A. Only in spring
B. In autumn
C. Every night
D. Only in summer

4. Which seasonal changes are mentioned?

A. Longer days and hotter temperatures only
B. Shorter days and cooler temperatures
C. More sunlight every day
D. No weather changes

5. Why do yellow and orange colors show?

A. Roots turn yellow
B. Less chlorophyll allows them to show
C. Trees immediately lose every leaf
D. Leaves are painted

6. What can create red or purple shades?

A. Paint in the soil
B. Wind
C. Other substances in leaves
D. Chlorophyll alone in every case

7. Why may trees show different colors or timing?

A. Only trunk size matters
B. Tree type and weather vary
C. Leaves choose a color every minute
D. All trees are identical

8. What does substance most nearly mean here?

A. An animal
B. A rain tool
C. A kind of material
D. A season

9. What is the main idea?

A. Chlorophyll is found only in soil
B. All leaves are yellow all year
C. Seasonal changes affect the colors seen in leaves
D. People paint trees

10. Which detail explains why leaves are green during the growing season?

A. They contain chlorophyll
B. Some leaves become purple
C. Weather varies by tree
D. Days are shorter in autumn

Passage 4: A Community Library

A community library lends books and other materials to people with library cards. Visitors can read quietly, use computers, attend story hours, or ask librarians for help finding information. Libraries often organize books by subject so readers can locate them easily. Some offer large-print books, audiobooks, and digital books. Borrowed items usually have a due date that tells when they should be returned.

1. What does a community library lend?

A. Only food
B. School uniforms
C. Cars
D. Books and other materials

2. What may visitors do at a library?

A. Cook dinner
B. Play loud music everywhere
C. Repair roads
D. Attend story hours

3. Who can help visitors find information?

A. Dentists
B. Bus drivers
C. Gardeners
D. Librarians

4. Why are books organized by subject?

A. To hide books
B. To help readers locate them
C. To make books heavier
D. To stop reading

5. What may help someone who struggles with small print?

A. A tiny label
B. A blank page
C. A large-print book
D. A book with no words

6. What is an audiobook?

A. A book that can be listened to
B. A library card
C. A book made of stone
D. A shelf label

7. What does a due date tell a borrower?

A. How many pages a book has
B. When the library was built
C. Which book is longest
D. When an item should be returned

8. Why offer different book formats?

A. To stop borrowing
B. To meet different needs
C. To replace librarians
D. To make every book the same

9. What is the main idea?

A. Libraries provide resources and services to a community
B. Visitors may never ask questions
C. All books must be bought
D. Libraries only store old books

10. Which detail shows libraries serve different readers?

A. They have doors
B. A due date is printed
C. Books have pages
D. They offer large-print, audio, and digital books

Passage 5: Animal Homes

Animals live in places that meet needs for food, water, shelter, and space. A rabbit may rest in a burrow, while a bird may build a nest in a tree. Fish live in water and use gills to take oxygen from it. Some animals use materials nearby to build shelters; others find natural spaces such as hollow logs. A habitat includes living things and nonliving parts of an animal's environment.

1. What needs can a habitat help meet?

A. Food, water, shelter, and space
B. Only sunlight
C. Only sleep
D. Books and pencils

2. Where might a rabbit rest?

A. Inside a book
B. In a burrow
C. On a cloud
D. In a bird's nest

3. Where might a bird build a nest?

A. In a pencil case
B. In a tree
C. Inside a fish
D. Under the ocean floor

4. What do fish use to take oxygen from water?

A. Feathers
B. Fur
C. Leaves
D. Gills

5. What is a hollow log?

A. A weather tool
B. Rabbit food
C. A natural space that may provide shelter
D. A kind of bird

6. How do some animals make shelters?

A. They buy bricks in stores
B. They ask plants to build houses
C. They do not need shelter
D. They use materials around them

7. What does habitat mean here?

A. Only an animal's food
B. A weather station
C. Only a nest
D. An animal's environment, living and nonliving

8. Which is a nonliving part of a habitat?

A. A bird
B. A rabbit
C. Water
D. A growing tree

9. What is the main idea?

A. Fish build nests on land
B. Animals use different habitats and shelters to meet their needs
C. Animals need no water
D. All animals live in trees

10. Which detail shows habitats differ?

A. Rabbits may use burrows while birds may use nests
B. Every animal lives in a log
C. All animals have the same home
D. No animal uses shelter

Hard Questions

Passage 1: Following a River

A river begins where water gathers, such as hills, springs, or melting snow. It flows downhill and may join smaller streams. As it moves, it can carry tiny pieces of soil and rock. Over time, this movement can shape the land. Near its mouth, a river may spread into a lake, sea, or ocean. People study rivers because they provide water and support plants, animals, farms, and towns.

1. Where can a river begin?

A. Only in the ocean
B. Inside a tree
C. Hills, springs, or melting snow
D. In a classroom

2. Which direction does a river generally flow?

A. Downhill
B. In circles around a hill
C. Up a mountain
D. Only north

3. What may a river carry?

A. Books and pencils
B. Tiny pieces of soil and rock
C. Bird feathers only
D. Only large trees

4. How can a river change land over time?

A. By carrying soil and rock
B. By freezing every day
C. By making mountains vanish overnight
D. By stopping all plants

5. What is a river's mouth?

A. Where it empties into another body of water
B. A place where fish speak
C. A rain tool
D. The highest point of a hill

6. Why do people study rivers?

A. They only help maps
B. They are always empty
C. They cannot affect land
D. They provide water and support living things and communities

7. Which sequence best describes river movement?

A. Soil becomes river then mountain
B. Water gathers, flows downhill, carries material, and reaches larger water
C. Water reaches ocean, climbs hill, becomes snow
D. A river begins in a town and ends in a tree

8. What does shape the land mean?

A. Name the land
B. Draw a picture
C. Change the land's form
D. Cover land with paper

9. Which statement is supported?

A. Rivers only help people
B. Rivers never join streams
C. Rivers can carry soil and rock

D. All rivers begin in the same place

10. What is the main idea?

A. Rivers only carry fish
B. Rivers are made by people
C. Rivers flow through landscapes and affect land and living things
D. All water stays in hills

Passage 2: How Bridges Stay Strong

Engineers design bridges to carry people, cars, and trains. Bridges must also handle wind and changes in temperature. Triangles are often used in bridge frames because their shape can distribute forces and resist bending. Builders choose materials based on a bridge's purpose, span, and expected load. After a bridge opens, inspectors check it regularly for cracks, rust, and other signs of damage.

1. Who designs bridges?

A. Dentists
B. Engineers
C. Librarians
D. Bakers

2. What loads may a bridge carry?

A. Only leaves
B. Only clouds
C. Books in a library
D. People, cars, and trains

3. What else must a bridge handle?

A. Only sunlight
B. The taste of water
C. Music and speech
D. Wind and temperature changes

4. Why are triangles used in bridge frames?

A. They help distribute forces and resist bending
B. They make every bridge float
C. They remove the need for materials
D. They make bridges invisible

5. What helps determine material choice?

A. Drivers' names
B. Day of the week
C. Nearby flower colors only
D. Purpose, span, and expected load

6. What do inspectors look for?

A. Bird songs
B. Food scraps
C. New books
D. Cracks, rust, and other damage

7. Why inspect a bridge after opening?

A. To find damage and help keep it safe
B. To stop all road use
C. To make it shorter
D. To change its name weekly

8. What does distribute forces mean?

A. Make forces vanish
B. Hide forces in a box
C. Spread forces across parts of a structure

D. Push all forces into one point

9. Which detail shows design depends on use?

A. Inspectors look for rust
B. Wind can affect bridges
C. Bridges carry people
D. Materials are chosen based on purpose, span, and load

10. What is the main idea?

A. Bridges are designed for forces and inspected for safety
B. Inspections happen only before construction
C. All bridges use the same material
D. Triangles are only decoration

Passage 3: The Journey of Drinking Water

Before water reaches many homes, it may travel through a treatment system. Water is collected from a source such as a reservoir or river and sent to a treatment plant. Processes remove dirt and reduce harmful germs. The treated water is tested, then moves through pipes to homes and buildings. Protecting rivers and reservoirs matters because cleaner source water can make treatment easier, although water still needs proper treatment and testing.

1. Where may water be collected from?

A. A bookshelf
B. A car tire
C. A desk
D. A reservoir or river

2. Where is water sent after collection?

A. A library
B. A bakery
C. A treatment plant
D. A toy store

3. What do treatment processes remove or reduce?

A. Pipes and buildings
B. Every mineral in the world
C. Dirt and harmful germs
D. All water

4. Why is treated water tested?

A. To choose paint color
B. To measure house height
C. To check its quality
D. To count people

5. How does treated water reach homes?

A. Through pipes
B. Through books
C. By growing on trees
D. On birds

6. Why protect source water?

A. Rivers stop flowing
B. Treatment is never needed
C. Water changes into soil
D. Cleaner water can make treatment easier

7. Which statement is important?

A. Clear water is always safe without testing
B. Water still needs proper treatment and testing
C. Pipes remove every problem

D. All sources are identical

8. What does source water mean here?

A. Water inside a cloud
B. Car-washing water only
C. Water before it is treated
D. Water in a cup after drinking

9. Which sequence is correct?

A. Treat, build a river, test a building
B. Collect, treat, test, send through pipes
C. Send home, collect, remove pipes, treat
D. Test, turn into soil, collect, send to river

10. What is the main idea?

A. All water is safe without treatment
B. Treatment plants create rivers
C. Water is treated and tested before distribution
D. Water travels through air

Passage 4: How Bees Communicate

Honeybees can share information about food through movements often called dances. A worker bee returning to the hive may move in a pattern that gives other bees clues about where food can be found. The direction and length of part of the dance can relate to the direction and distance of the food. Bees also use flower smells and information from their surroundings. These signals help the colony find nectar and pollen.

1. How can honeybees share food information?

A. By writing notes
B. By drawing maps
C. Through movements called dances
D. By building road signs

2. Which bee may perform the dance?

A. A butterfly in a pond
B. A fish
C. A worker bee returning to the hive
D. A bird in a nest

3. What clues can the dance give?

A. Next year's weather
B. The age of each bee
C. Classroom rules
D. Where food can be found

4. What can direction and length of part of the dance relate to?

A. Direction and distance of food
B. Room temperature
C. Bee weight and color only
D. Number of trees

5. What other information do bees use?

A. Human speech only
B. Printed labels
C. Road maps
D. Flower smells and surroundings

6. What are nectar and pollen in this passage?

A. Parts of a wing only
B. Resources bees search for
C. Road-building materials

D. Weather tools

7. Why are signals useful to the colony?

A. They make food disappear
B. They stop bees visiting flowers
C. They help bees find food efficiently
D. They prevent flying

8. What does colony mean here?

A. A group of bees living together
B. A single flower
C. A weather station
D. A dance step

9. Which conclusion is supported?

A. Bees find food only by guessing
B. Bees use more than one clue to find food
C. Bees ignore their surroundings
D. Every bee does the same task all day

10. What is the main idea?

A. All insects make honey
B. Honeybees use information to help find food
C. Bees communicate in writing
D. Flowers move to find bees

Passage 5: Preparing for a Storm

Weather forecasters use observations and computer models to predict storms, but forecasts are not perfect. When a warning is issued, families can check supplies, charge phones, and learn where to go if conditions become dangerous. People should follow local emergency officials rather than rumors. After a storm, damaged wires, flooded roads, and unstable trees may remain dangerous even when the sky looks clear. Preparation and patience can reduce risk.

1. What do forecasters use to predict storms?

A. Playing cards
B. Cooking tools
C. Only rumors
D. Observations and computer models

2. Why are forecasts not perfect?

A. Storms happen indoors
B. Computers cannot store data
C. Weather never changes
D. Predictions involve uncertainty

3. What can families do when warned?

A. Drive through floodwater
B. Touch damaged wires
C. Check supplies and charge phones
D. Ignore every warning

4. Whose guidance should people follow?

A. Fictional characters
B. Unknown rumors
C. Local emergency officials
D. Anyone who guesses

5. Which danger may remain after a storm?

A. A school bell
B. Damaged wires
C. A flower changing color

D. An overdue book

6. Why may flooded roads be dangerous?

A. They are always dry underneath
B. They charge phones
C. They may be unsafe to travel on
D. They remove hazards

7. What does a clear sky after a storm mean?

A. Wires are harmless
B. It does not prove all dangers are gone
C. All roads are safe
D. No one needs care

8. What does reduce risk mean?

A. Remove all weather
B. Make a storm stronger
C. Make danger less likely or less harmful
D. Predict every event exactly

9. Which action is safest after a storm?

A. Touch a fallen wire
B. Stay away from damaged wires and follow official guidance
C. Ignore safety advice
D. Walk through floodwater for fun

10. What is the main idea?

A. Preparation and official guidance help people stay safer during storms
B. Rumors are best
C. Clear skies prove every place is safe
D. Warnings are always wrong

Answer Key

Answers are grouped by difficulty. Question numbers restart at 1 in each section.

Easy

1. C 2. C 3. D 4. A 5. B 6. B 7. D 8. D 9. A 10. C
11. D 12. C 13. B 14. D 15. B 16. B 17. C 18. A 19. B 20. C
21. D 22. C 23. B 24. C 25. C 26. A 27. B 28. B 29. B 30. B
31. C 32. B 33. D 34. D 35. A 36. D 37. B 38. A 39. A 40. C
